Windows vista sp1 64 bit

Home / Patches / Windows OS / Windows Vista 64-bit Service Pack 1: Vista 64-bit SP1 (Final Release) Windows Vista 64-bit Service Pack 1 (also called Vista 64-bit SP1) fixes a range of bugs in Windows Vista. It provides enhanced security measures that hopefully improve defenses against viruses, worms and hackers, along with increased management and improved experience for users. Vista Service Pack 1 is a great download and can be applied to any 64-bit version of Windows Vista (it doesn't use this for 32-bit versions of Vista). Windows Vista 64-bit Service Pack 2 and security updates then also need to be installed in order to properly secure your computer. These are available in the Windows section of this site. Download Free Windows Os Author Microsoft File Name Windows6.0-KB936330-X64-wave0.exe File Size 726MB System Required Windows Vista 64-bit (all versions) Windows Vista Service Pack 1 (SP 1) is Good, Windows Free Software is part of Software software with translators is sub-category and has been created by Microsoft. More about Windows Vista Service Pack 1 (SP 1) Since the program was added to our catalog in 2011, it has gained 56,006 downloads, and last week it gained 11 downloads. Windows Vista Service Pack 1 (SP 1) is a relatively light program that does not require as much storage space as most software in the software utilities section. The program is very heavily used in the United States, Canada, and Australia. App version information is not available and has been updated on 6/20/2011. This version is available for users with the operating system Windows Vista and previous versions, and it is available in many languages such as English, Spanish, and German. So the first major update to Windows Vista came here in the latest, fourteen months after Microsoft's latest operating system was finally released. Many potential Vista customers at the startup were advised to wait for package service 1 – so was this advice valid? Service Pack 1 includes a range of improvements to Windows Vista that are focused on three main areas, which are Microsoft conditions: Quality Improvement, Emerging Hardware & Standards and Infrastructure Optimization Quality Improvements are essentially bug fixes, and this part of the service pack includes all the small updates that have been applied since the release of Vista by Windows Update, in a handy bundle. Quality improvements also include efforts to improve system stability and reliability, mainly when it comes to working with 3rd party applications like those you can download from Softonic. Emerging hardware and standards point to additional support for newer technologies in Vista. Since the code for Vista was finalized, new technologies have been released that many users want to deploy to their PCs. Examples of these technologies include 64-bit EFI network boot, exFAT storage, improved support for HD-DVD and Bluray technologies, additional encryption algorithms, full wireless support for 802.11n wireless, much more. Infrastructure optimization consists of various improvements designed to help organizations deploy and patch Windows more easily. System administrators will welcome improvements to the network detection tool, disk fragmentation, group policy and network access protection. What needs to be said about Windows Vista Service Pack 1 is that it still doesn't contain many innovations that were originally promised as components in the operating system. While many of these hotfixes, security improvements and technological upgrades are more than welcome, there's little to get really excited about in SP1. So yes, it's probably logical to wait for this upgrade, but don't expect Vista to suddenly become a complete operating system that simply doesn't happen. That said, SP1 does include many fixes that may prove very useful for users, especially when it comes to security, and that's why it's recommended updates for all Windows Vista PCs. Windows Vista Service Pack 1 (SP1) updates to Windows Vista that address feedback from our customers. In addition to previous updates, SP1 will include changes focused on addressing certain reliability, performance, and compatibility issues; support for new types of hardware; and add support to several emerging standards. SP1 will also continue to make it easier for information managers to deploy and manage Windows Vista. Windows Vista Service Pack 1 Five Language Standalone version can be installed on systems with any of the following language versions: English (US), French, German, Japanese, or Spanish (Traditional). Service Pack 1 introduces support for some new hardware and software standards, notably exFAT file system, 802.11n wireless network, IPv6 over VPN connections, and secure socket tunnel protocol. Booting a system using the Extensible operating system interface on x64 systems is also being introduced; the feature had originally been for the initial release of Vista Bars but was delayed at the time due to a lack of compatible hardware. Two areas have seen changes in service pack 1, resulting in concerns from software vendors. One of these is desktop search; users will be able to change the default desktop search app to the one offered by a third party rather than Microsoft's desktop search app that comes with Windows Vista, and desktop search apps will be able to seamlessly tie in their services to the operating system. The changes are partly due to complaints from Google that its Google desktop search app was hampered by the presence of Vista's built-in desktop search. In June 2007, Google claimed that the changes introduced for the Pac-1 service were a step in the right direction, but they need to be further improved to give consumers greater access to alternative desktop search providers. from patching the nucleus. The update to DirectX 10, called DirectX 10.1, makes mandatory multi-feature previously optional in DirectX 10 hardware. Graphics cards will be required to support DirectX 10.1. Service Pack 1 consists of a kernel (6001) that matches the version shipped with Windows Server 2008. The Group Policy Management Console is replacing the group policy object editor. An updated downloadable version of the Group Policy Management Console is scheduled for release within the same timeframe as the release of the service package. Service Pack 1 (SP1) is Microsoft Windows Vista's latest update. The package itself consists entirely of about 434.5MB for the 32-bit and 726.5MB versions for the 64-bit version. Although service pack contains nothing new to add to the operating system it contains many performance improvements and fixes previously irritating problems. Before starting the link below tells you what you need to do before installing the Vista 1 service package learn how to install Windows Service Pack 1 (SP1) the service pack should be downloaded automatically via Windows Update, by downloading being between 60 and 435MB depending on whether your device already has all of the latest Windows updates. If you are able to download Vista SP1 via Windows Update first take a look at this knowledgebase article to see if you have all the requirements for Windows Update to download the package: If, however, you simply want to download the full standalone version (this incidentally can't currently slip into the original Vista DVD) then you can download it from the link below: important: make sure you download the correct version of the correct version of the update type for your system. Remember the 32-bit version of a 64-bit system and visa is not the opposite of the update; they cannot be replaced. First, check your system type to check which type of system you need, click the Start button, followed by the Control Panel. In the Control Panel, click the system icon. When viewing basic information about the window your computer opens look at the system section. Under the system type you will see either a 32-bit operating system or a 64-bit operating system. Any type of operating system displayed here is the type you need to download. Windows Vista Service Pack 1 For Windows Vista 32 Bit Update Link Windows Vista Service Pack 1 For Windows Vista 64 Bit Update Link PLEASE NOTE This download site is for IT Professionals and Developers and you are advised to not download this software if you are only updating one computer. However, this warning can be ignored as generally as the software Not only updating a computer but also numerous PCs. 1/ Just click download option. 2/ When the download dialog box pops up, click Save. 3/ Service Pack should now be saved to the download folder on your hard drive. 4/ When the download is finished, navigate to the folder where you save SP1 (the default download folder) and then, right click on the package service icon and, from the drop-down menu, click Run as Manager. 5/ If the User Account Control (UAC) windows open, and then click Continue to start the installation. You need to input the admin user name and password if you are not administrator. 6/ Installation may take some time, anything from 45 minutes to more than an hour or more, depending on how much of the package service needs to be installed. (if your computer has been fully released with all windows updates from Vista then the service package will be installed when the update and, as a result, take longer to complete. If your computer is fully updated with windows update service package will be installed faster. 7/ After installing the computer you need to restart. During the reboot sequence you will be notified of the update progress, as one of the 3 20% etc. when progress is reached 3 out of 3 100% and then the update is fully installed.
